

## Aging Skin

This targeted treatment uses the Dermabuilder multi-peptide anti ageing serum to help diminish the appearance of fine lines and wrinkles, while also enhancing the skin's elasticity, for visibly noticeable plumping and tightening of the skin. It also combines a glysalhydrda skin peel that allows delivery of the powerful cocktail of anti oxidants and hydrating agents directly into the skin.

### **So how does it do all this:**

#### STEP 1: DETOX

---

Lymphatic drainage helps to increase circulation of the lymphatic system. This increases blood flow to the area, bringing oxygen to support the cells whilst also bringing fresh clean lymph to restore hydration, tone and firm the skin, and eliminate toxins.

#### STEP 2: CLEANSING & EXFOLIATION

---

Dead skin cells are gently exfoliated to reveal healthy, new skin whilst, simultaneously, a serum containing lactic acid, glucosamine and many botanical extracts is delivered deeply to cleanse and nourish the skin.

#### STEP 3: BRIGHTENING AGENT

---

This gentle glycolic and salicylic solution helps loosen debris from your pores ready for the extraction stage whilst brightening the appearance of the skin.

#### STEP 4: EXTRACTION

---

Effortless extractions help to remove blackheads and draw out impurities in congested areas using a serum of natural salicylic acid and honey extract.

#### STEP 5: DERMABUILDER - TARGETED ANTI-AGEING SERUM

---

Application of the patented Dermabuilder serum into the deep lines and wrinkles using a twist and a kiss method helps to immediately visibly improve their appearance and plump up the skin, while long term effects are produced by stimulation of the collagen.

#### STEP 6: HYDRATION

---

HydraFacial Vortex-Fusion technology delivers a cocktail of hydrating hyaluronic acid and the most advanced and powerful antioxidants, peptides and multi-peptides to replenish the skin, leaving it hydrated, plumped up and at optimum skin health.

#### STEP 7: REJUVENATION

---

Red and infrared LED light is used to reduce redness and further stimulate collagen. The light also supports the natural production of vitamin D, leaving your skin glowing.
