

# Cellvite Lift

## What is it?

Cellvite is a combination of 3 technologies. Radiofrequency, Red LED light and Vacuum Suction. The combination of these 3 technologies have the ability to heat the skin at a deep level, infuse light at an even deeper level and speed up the blood and lymphatic systems to achieve a very effective result deep into the skin cell.

## How does it work?

This hand piece combines Multi-polar Radio Frequency (Heat) Vacuum suction and 650 LED red light in one handpiece which treats the face and neck simultaneously. The multipolar RF (Heat) focuses on lifting and toning resulting in the elimination of wrinkles, fine lines, double chin and tightening of the skin on the neck. The Vacuum improves the lymphatic system by acting as a detox therapy and the 650 LED (Red Light) can improve and increase metabolism and circulation and make the treatment effects faster and more effective.

## How will it benefit me?

- Enhances luminosity of the skin
- Face & neck lifting & remodelling
- A noticeable improvement in skin tone
- Reduces wrinkles and lift sagging skin
- Tighten loose skin
- Increase collagen level
- A reduction in the appearance of double chins
- Improves dark circles

## How many sessions do I need?

The number of treatments needed depends on age, condition, the desired outcome and the necessary length of time it takes to achieve the individual's goal. Treatment numbers vary from person to person but most procedures involve 4-6 treatments.

## When will I see results?

To achieve long-term consistency of tighter, firmer skin, we recommend 6-8 treatments. The results are due to natural changes in the skin and as such are on-going and long lasting. These can be enhanced with good evidence based skincare, UV protection and periodic top-up treatments.

## Will the results last?

Results vary from patient to patient. They can last up 12 months or more based on the client's natural aging process and sun and environmental exposure. A maintenance treatment periodically will help maintain results. It is also worth noting

that when Cellvite Lift therapy is used in combination with other modalities such as IPL, Hydrafacial, micro current, the results derived can be enhanced.

## What happens during the treatment?

The skin is prepared by cleansing, toning, a skin analysis and exfoliation. A peptide gel is then applied to the skin. Then the Cellvite head is moved along the skin in a pulsing action (Vacuum) delivering heat and light. The client will feel a warmth in the skin which is relaxing and the pulsing of the Vacuum suction is also very soothing making this not only a very effective antiaging treatment but a very relaxing time out for the client.

## Is there anyone not suitable for Cellvite Lift?

- Superficial metal or other implants in the treatment area or a pacemaker
- Current or history of skin cancer, as well as any other type of cancer, or premalignant moles.
- Severe concurrent conditions, such as cardiac disorders
- Anyone suffering from Diabetes
- Any active condition in the treatment area, such as sores, psoriasis, eczema, and rash.
- Facial laser resurfacing and deep chemical peeling within the last 3 months, if face is treated.

## Is there any down time after the treatment?

There is no down time after Cellvite Lift treatment you may appear mildly red but this disappears quickly.

## Is there anything I need to do after the treatment?

There is no special care needed after the treatment but following a good skin care regime as guided by your therapist will greater the effects of your treatment.
