

## Pigmentation or Skin discoloration

The Dermabuilder treatment delivers tailored glycolic and Salicylic Acids which work to diminish the appearance of brown marks (pigmentation), age spots and liver spots, all types of skin discolouration that are associated with sun damage and are often seen as an early sign of ageing skin due to the differences in tone.

So how exactly can it does it work:

### STEP 1: DETOX

---

Lymphatic drainage helps to increase circulation of the lymphatic system. This increases blood flow to the area bringing oxygen to support the cells whilst also bringing fresh clean lymph to restore hydration and tone and firm the skin whilst eliminating toxins.

### STEP 2: CLEANSING & EXFOLIATION

---

Dead skin cells are gently exfoliated to reveal healthy, new skin whilst simultaneously a serum containing lactic acid, glucosamine and many botanical extracts are delivered deeply to cleanse and nourish the skin.

### STEP 3: GLYSAL HYDRAPEEL

---

Different strengths of glycolic and salicylic acid agents are used in a tailored way specific to the skin condition to help improve the appearance of pigmentation.

The GlySal Hydrapeel has none of the down time and reduced post peel scaling associated with standard peels due to the prior removal of dead skin cells and delivery of the powerful cocktail of anti oxidants and hydrating agents which follow.

#### STEP 4: EXTRACTION

---

Effortless and painless extractions helps to remove black heads and draw out impurities in congested areas using a serum of natural salicylic acid and honey extract.

#### STEP 5: HYDRATION

---

HydraFacial Vortex-Fusion technology delivers a cocktail of hydrating hyaluronic acid and the most advanced and powerful antioxidants, peptides and multi peptides to replenish the skin leaving it hydrated, plumped up and promoting optimum skin health.

#### STEP 6: REJUVENATION

---

Red and infrared LED light is used to reduce redness and further stimulate collagen. The light also helps the natural production of vitamin D leaving your skin glowing.
